## PROJECTS

2025

### Cozy Qejani

Currently building a full-stack **eCommerce platform** using the MERN stack (Vite, MongoDB, Express, React, Node) and TailwindCSS. Includes features like product filtering, shopping cart, and checkout. Currently undergoing testing and optimizing for performance and user experience in my development process.

2025

### Kuza Beyond

Built and deployed a high-performance **fintech website** using React and Tailwind, reducing page load times by over 50% and doubling organic traffic through SEO best practices and mobile-first design.

2024

### My Portfolio Website

Crafted a **responsive personal portfolio** with HTML, JavaScript, and TailwindCSS to display projects and contact info. Included scroll reveal animations, SweetAlert modals, and emailJS for messaging. Fully deployed and optimized for mobile and desktop.

2023 – 2024

### ParkPave

Developed a **peer-to-peer parking platform** using Bootstrap, PHP, JavaScript, and SCSS, allowing users to list and book parking spaces. Integrated location-based search and user authentication for ease of access. Completed as a university project showcasing full-stack development for urban mobility.
